CONTAINMENT & LINING SYSTEMS

REUSABLE SECONDARY CONTAINMENT SYSTEM

SiteSaver SC

A Proven, Low Cost Secondary Containment System

SiteSaver™ SC — Portable Secondary Containments

Introducing the **SiteSaver SC**, a sister product to the SiteSaver Drill Pad Containment System. It is specifically designed to address the performance criteria and environmental regulations required for secondary containment solutions.

SiteSaver SC features HDPE floor panels and berms (up to 6 ft. tall) to contain spills near the source of contamination and prevent run-off onto the entire well pad.

SiteSaver SC: Features and Benefits

- The base material is two to three times thicker than most liners. Made with HDPE, it will withstand the roughest treatment and offers excellent chemical and UV resistance
- Easily transported, rolled-out, and positioned on location
- Assembled in a fraction of the time required by other containment systems
- Wall heights up to 6 ft. are supported by steel wall supports that will not collapse or deform and are easily installed
- Corners require only two through-bolts
- Any wall section can be laid flat to allow equipment to be rolled in or out of the containment and then quickly secured to provide watertight containment
- Easily cleaned, rolled-up, and reused multiple times
- Can be enlarged or modified on location utilizing fusion-welding technology
- 100% recyclable once SiteSaver SC is placed out of service

SiteSaver SC

Product Versatility In Size and Shape

SiteSaver SC is available in standard sizes and can also be designed and pre-fabricated to your job specs. It is then delivered to the site, rolled out, and ready for use. It can be configured to virtually any size containment, based on your specific demands.

For containments requiring larger floor dimensions, exceeding 40 ft. in width, panel sections can be fusion-welded in the field to complete the system to the required dimensions.

SiteSaver for Permanent Containment

For permanent onsite containments, SiteSaver SC is well suited for tank batteries and ancillary equipment. This system can also be designed for occasional entry by service vehicles, tank maintenance or removal, without the need of a crane.

Contact your local SiteSaver Distributor to learn more about SiteSaver SC, or the SiteSaver System for well pads and drilling sites. SiteSaver and SiteSaver SC are both available as rental or purchase items.

SiteSaver™ - An environmentally compliant lining and containment solution for drilling sites, well pads and other industrial locations requiring groundwater or environmental protection.

SiteSaver is made with recycled HDPE, it is re-usable, and can be recycled at the end of its service life.

SiteSaver is approved by the PA DEP.

How It Works

SiteSaver SC is pre-fabricated to your spec, then delivered to the site.

Once unrolled, corners are folded up, overlapped and bolted together.

Edges are folded up to specified height, then reinforced with steel wall supports.

Containers or trailers are moved into place before final wall is secured.

Final wall raised and supported to complete installation of SiteSaver SC.
